About Heamar

Heamar Company Limited provides high quality general tooling, specialist tooling, components and lighting solutions to a range of markets including Aerospace, Defence, Maintenance, Repair and Overhaul (MRO), CEM, Mass Transit and Autosport. With over 40 years experience supplying tooling for electrical harnesses, from wire cutters through to full DMC electrical kits, Heamar can help you make informed decisions around technology, applications and relevant standards. We strive to build strong interactions with our customers and suppliers to ensure a prompt, professional and competitive service.

Heamar has achieved BSI AS/EN 9120 REV B Certification, a standard developed for distributors and suppliers working with original equipment manufacturers (OEMs), specifically driven by the aerospace industry. As an accreditation it incorporates but exceeds ISO9001. It focuses on product safety and reliability, addressing critical product performance, conformity to specifications and airworthiness. It covers the chain of custody, traceability, stock control and availability of records. This certification ensures customers can have complete confidence in purchasing both tooling and components from Heamar.

Product Portfolio

Heamar are the UK Master Distributor for IDEAL Industries and other specialist tooling brands, including Astro Tool Corporation, Band-It, Compaero, Daniels Manufacturing Corporation (DMC), Hotweezers, Klauke, PACE Worldwide, Rennsteig, Steinel and TE Connectivity.

Heamar offers a bespoke tool control and kitting service with many different options available, including cabinets from Bahco and Stahlwille, bespoke foam inlays and etching of tools. Heamar's product range also includes specialist task lighting from the Daylight Company and an advanced and comprehensive range of torque tools from Gedore Torque. Coupled with our specialist advice, for your convenience, we have a dedicated online store offering tooling, lighting and components with many items held in stock for urgent next day delivery.

Tool Kits

Heamar offers a bespoke tool control and kitting service with many different options available. Heamar provides a range of options from tool rolls through to cases and roll cabinets, in a range of different colours as well as providing assistance with the design and configuration of your kit. Tool kits can be either electrical/avionic, mechanical or a combination of both depending on your requirements; simply provide a list of tools and Heamar supply one part number so there is no need to source different items from different places. Working with many brands and types of storage system, there are almost no limits to the options available when optimising your individual tool-storage environment. Bespoke tool kit covers featuring your company logo are also available.

Tool Control

Using a foam inlay system allows for neat and tidy organisation of tools so they are held securely in place. Each tool has its own individual place with a distinct colour mark, which makes a missing tool easy to detect. These foam inlays can be manufactured for new or existing tools.

As well as complete tool kits, Heamar are also able to supply the foam inlays alone if no case or cabinet is required; for example, if a shadow board needs replacing. Engraving of the tools, laser etching or printing to the foam can also provide a further level of tool control. By profiling the tools Heamar can design a tool control solution to your exact requirements.

Service, Calibration and Repair

Heamar provide a free wire evaluation service and can identify the appropriate tools to meet your needs. Simply send us a metre sample of the wire and we will do the rest.

As a master distributor, Heamar offer the complete range of precision hand stripping tools and machines from IDEAL Industries and connector tooling from Astro Tool Corporation. We are able to service, calibrate and repair these tools and provide the necessary certificates. Our trained engineers can completely strip down and rebuild the tools, returning them to original specifications, replacing old or damaged parts. We also recertify the tools, ensuring that they operate within the correct tolerances and limits as specified by the manufacturer. If a tool is irreparable we are able to supply a new one.

We are also able to arrange the repair, service and calibration of DMC connector tooling, Band-It tools and Steinel and Leister heat guns. If you'd like more information on our service, calibration and repair services, please contact us.
