### Tool Kits

Heamar offers a bespoke tool control and kitting service with many different options available. Heamar provides a range of options from tool rolls through to cases and roll cabinets, in a range of different colours as well as providing assistance with the design and configuration of your kit. Tool kits can be either electrical/avionic, mechanical or a combination of both depending on your requirements; simply provide a list of tools and Heamar supply one part number so there is no need to source different items from different places. Working with many brands and types of storage system, there are almost no limits to the options available when optimising your individual tool-storage environment. Bespoke tool kit covers featuring your company logo are also available.

### Tool Control

Using a foam inlay system allows for neat and tidy organisation of tools so they are held securely in place. Each tool has its own individual place with a distinct colour mark, which makes a missing tool easy to detect. These foam inlays can be manufactured for new or existing tools.

As well as complete tool kits, Heamar are also able to supply the foam inlays alone if no case or cabinet is required; for example, if a shadow board needs replacing. Engraving of the tools, laser etching or printing to the foam can also provide a further level of tool control. By profiling the tools Heamar can design a tool control solution to your exact requirements.

### Specialist Tool Kits

- Heamar specialist tool kits are used in the commercial aviation and military aerospace industry for airline service personnel dealing with AOG and base maintenance tasks.
- Many of the world's leading airlines, MROs and military organisations use Heamar specialised tool kits
- Heamar can supply tool kits specifically designed for your aircraft; for example, the Airbus A320 and Boeing 787 Dreamliner.

**Heamar provides a specialist MIL-Spec tooling kit for BAE Systems at their £5 million Humberside Training Academy.**

The kit will be used by apprentices on their Aircraft Maintenance and Support Apprenticeship scheme who are learning how to work on avionics and mechanical systems at airforce bases around the world.

The academy is responsible for the delivery of trained personnel into a number of UK and overseas contracts supporting some of the world's most advanced military fast jets. The apprentices at Humberside will be using the Heamar BAE Training Kit to learn how to work on avionics in military aircraft such as the Eurofighter.

## HTK1003 Specialist Tool Kit

The HTK1003 specialist tool kit supplied by Heamar includes MIL-Spec tooling from Astro Tool Corporation and Daniels Manufacturing Corporation, custom wire stripping tools from IDEAL Industries, Steinel heat guns and nozzles together with items from Heamar's own tooling range.

The requirement for this kit was driven by the need for tool control so tools were not left lying around or improperly stored. Now the tools can be organised in the case with the help of tool control foam.

Students and trainers can now quickly see where the tools go and if one is missing. BAE will purchase more of these kits in the future to further support and increase efficiency at the Humberside Training Academy.
